

Peering into the Big bang : the new microwave map of the Universe

U. A. Yajnik, Physics Department, IIT Bombay

November 2003, Nehru Planetarium, Mumbai

TYPESET USING L^AT_EX, FOIL_TE_X, L^YX, P_POWER4

Outline

- The expanding Universe; millions of galaxies
- The Big Bang and Cosmic Background Radiation
- Formation of galaxies
- New technology
 - ★ Hubble Space Telescope
 - ★ WMAP
- The new synthesis
- Summary
 - ★ Epilogue : Related big questions (Dark matter, cosmological constant ...)

Cosmography - I

Before the advent of large telescopes the Milky Way was our Universe.

Island universes

Nebulae in our Milky Way could not be distinguished from Galaxies.

Immanuel Kant conjectured that some of the nebulae could be “island universes” similar to our own.

Galaxy surveys

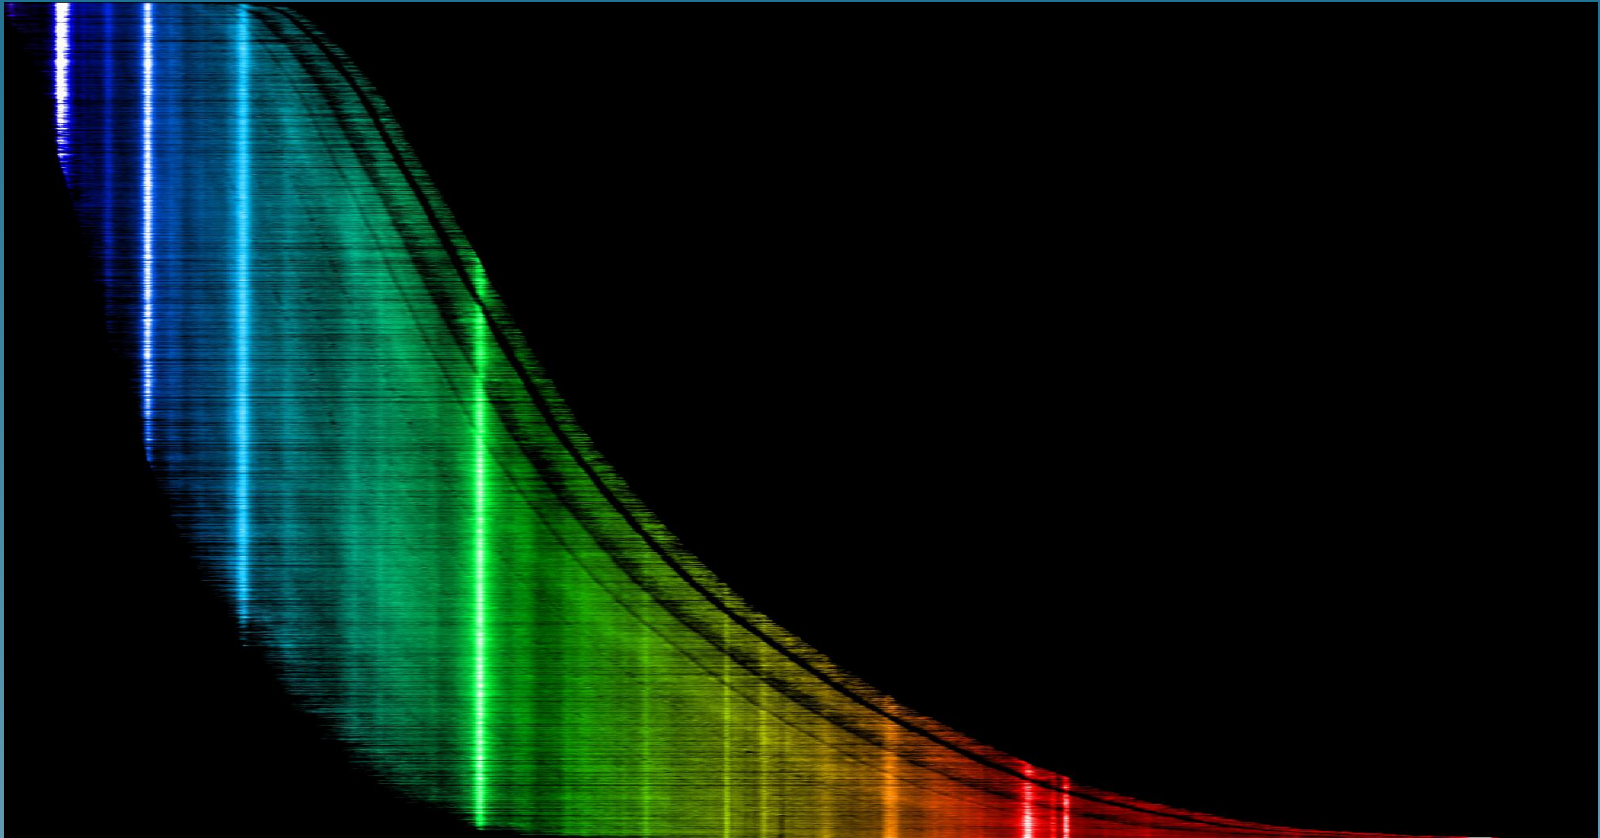

Galaxy surveys : 2 degree field

2dF : A joint UK and Australian project. Using the dark skies of Southern Hemisphere.

The Cosmic Expansion

Extrapolated sequence backwards in time

• Ionised Hydrogen	1 eV	10^4 K
• Free neutrons and protons	1 MeV	10^{10} K
• Quark-Gluon plasma	1 GeV	10^{13} K
• Electroweak scale	100 GeV	10^{15} K
• Quantum Gravity		10^{19} GeV

Neutral H formation $\sim 10^5$ years after the Big Bang

Relic radiation 10^4 K then; 3 K now

Alpher, **Bethe** and Gamow (1942)

Cosmography : main features

Current parameters of the Universe :

- Expansion rate 71 ± 4 (km/s)/MegaParsec
- Size of the visible Universe 3 GigaParsec
- Age of the Universe 13.7 ± 2 GigaYears
- Age at decoupling $380 \pm 7 \times 10^3$ Year

How do we know all this?

Cosmography - II

A bug in communication link

A noisy communication link in 1965

DISCOVERY OF COSMIC BACKGROUND

Microwave Receiver

MAP990045

Robert Wilson

Arno Penzias

Nearby, in Princeton Dicke, Roll, Peebles and Wilkinson were building the antenna required to detect the radiation.

Galaxy formation

Before there was anything, there was nothing, right?

So where did everything come from?

-*BC cartoon*

From homogeneous plasma

... to clumps of cold matter

Theory

Needed input : fluctuations in the matter density, $\frac{\delta\rho}{\rho}$ at a time t_1

- Matter : Perturbations grow proportional to scale factor $R(t)$
- Radiation : No growth in perturbations

At present epoch perturbations are large, $\sim O(1)$

$$\left[\frac{\delta\rho}{\rho} \right]_{eq} \sim \frac{R_{equality}}{R_0} \sim 10^{-4}$$

Imprints on the decoupled radiation

COBE and friends 1992-95

Power spectrum estimation

The sky can be described in terms of spherical harmonics

$$\Delta T(\mathbf{n}) = \sum a_{lm} Y_{lm}(\mathbf{n})$$

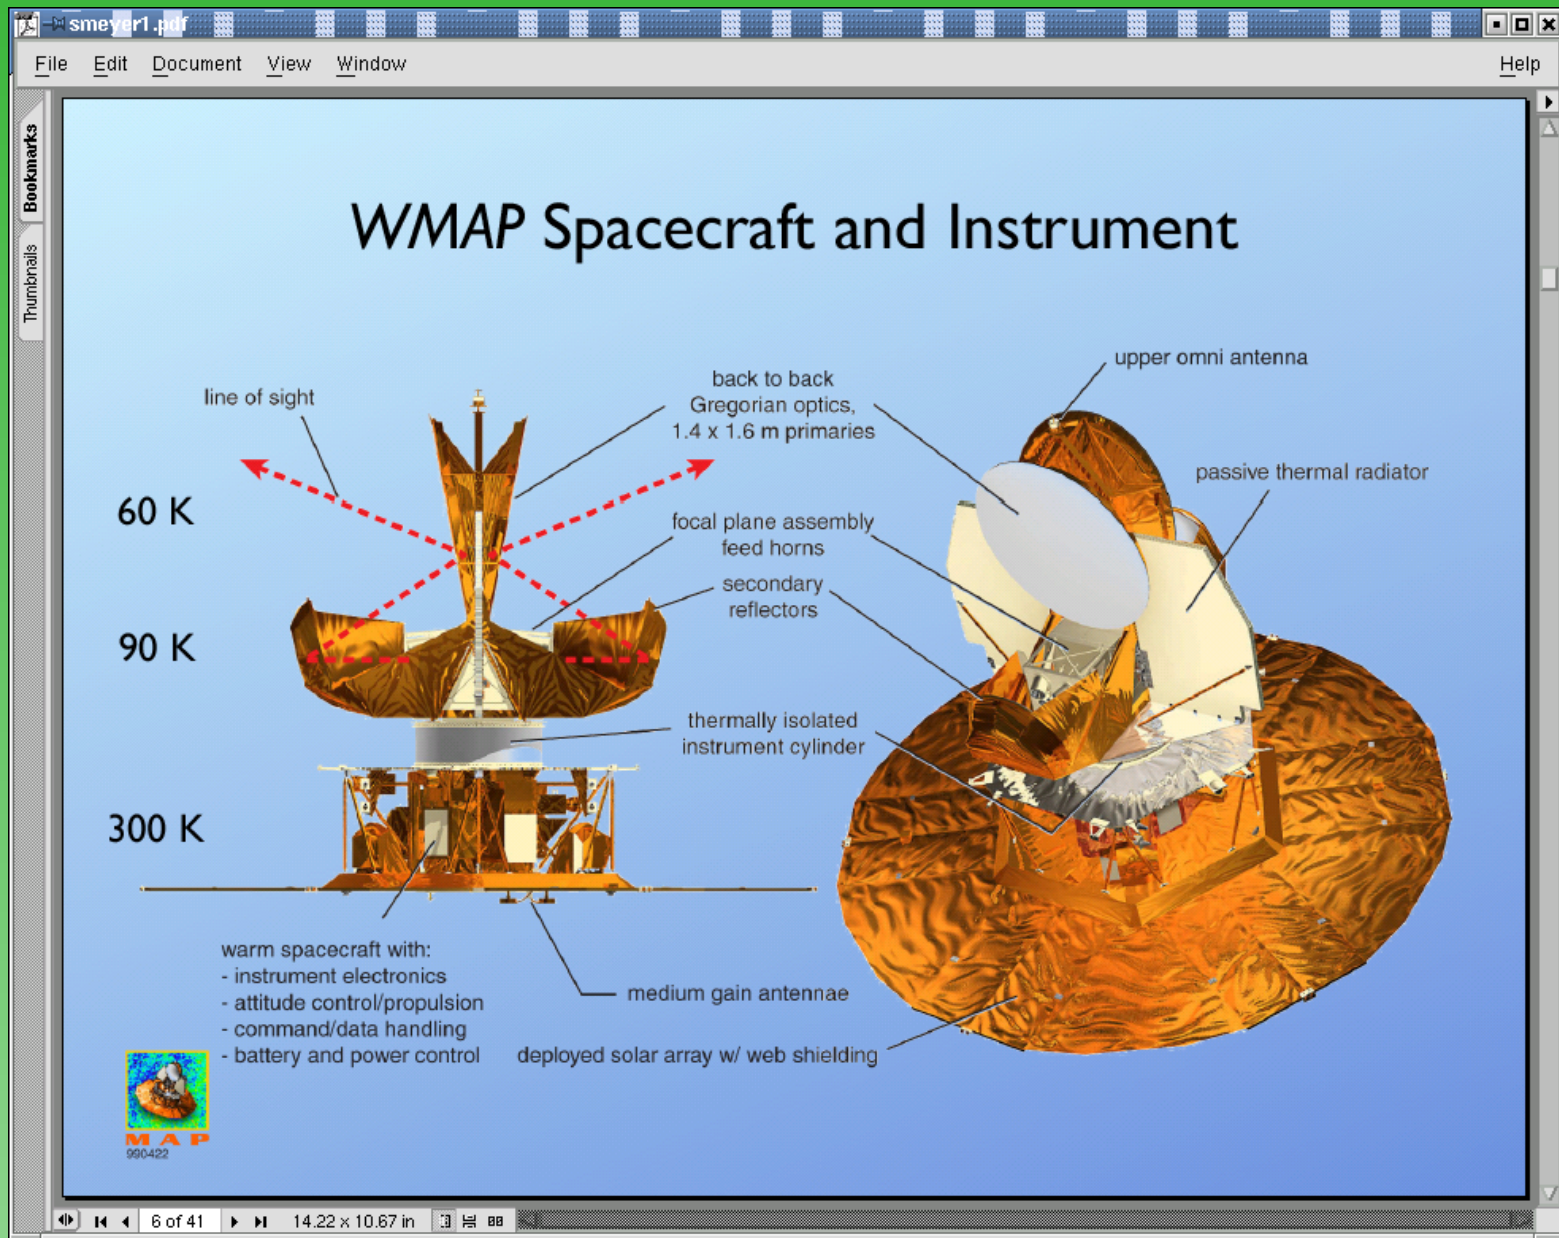

For the CMB we assume $\Delta T(\mathbf{n})$ is Gaussian distributed
and define

$$C_l \equiv \frac{1}{2l+1} \sum |a_{lm}|^2$$

The Wilkinson Microwave Anisotropy Project

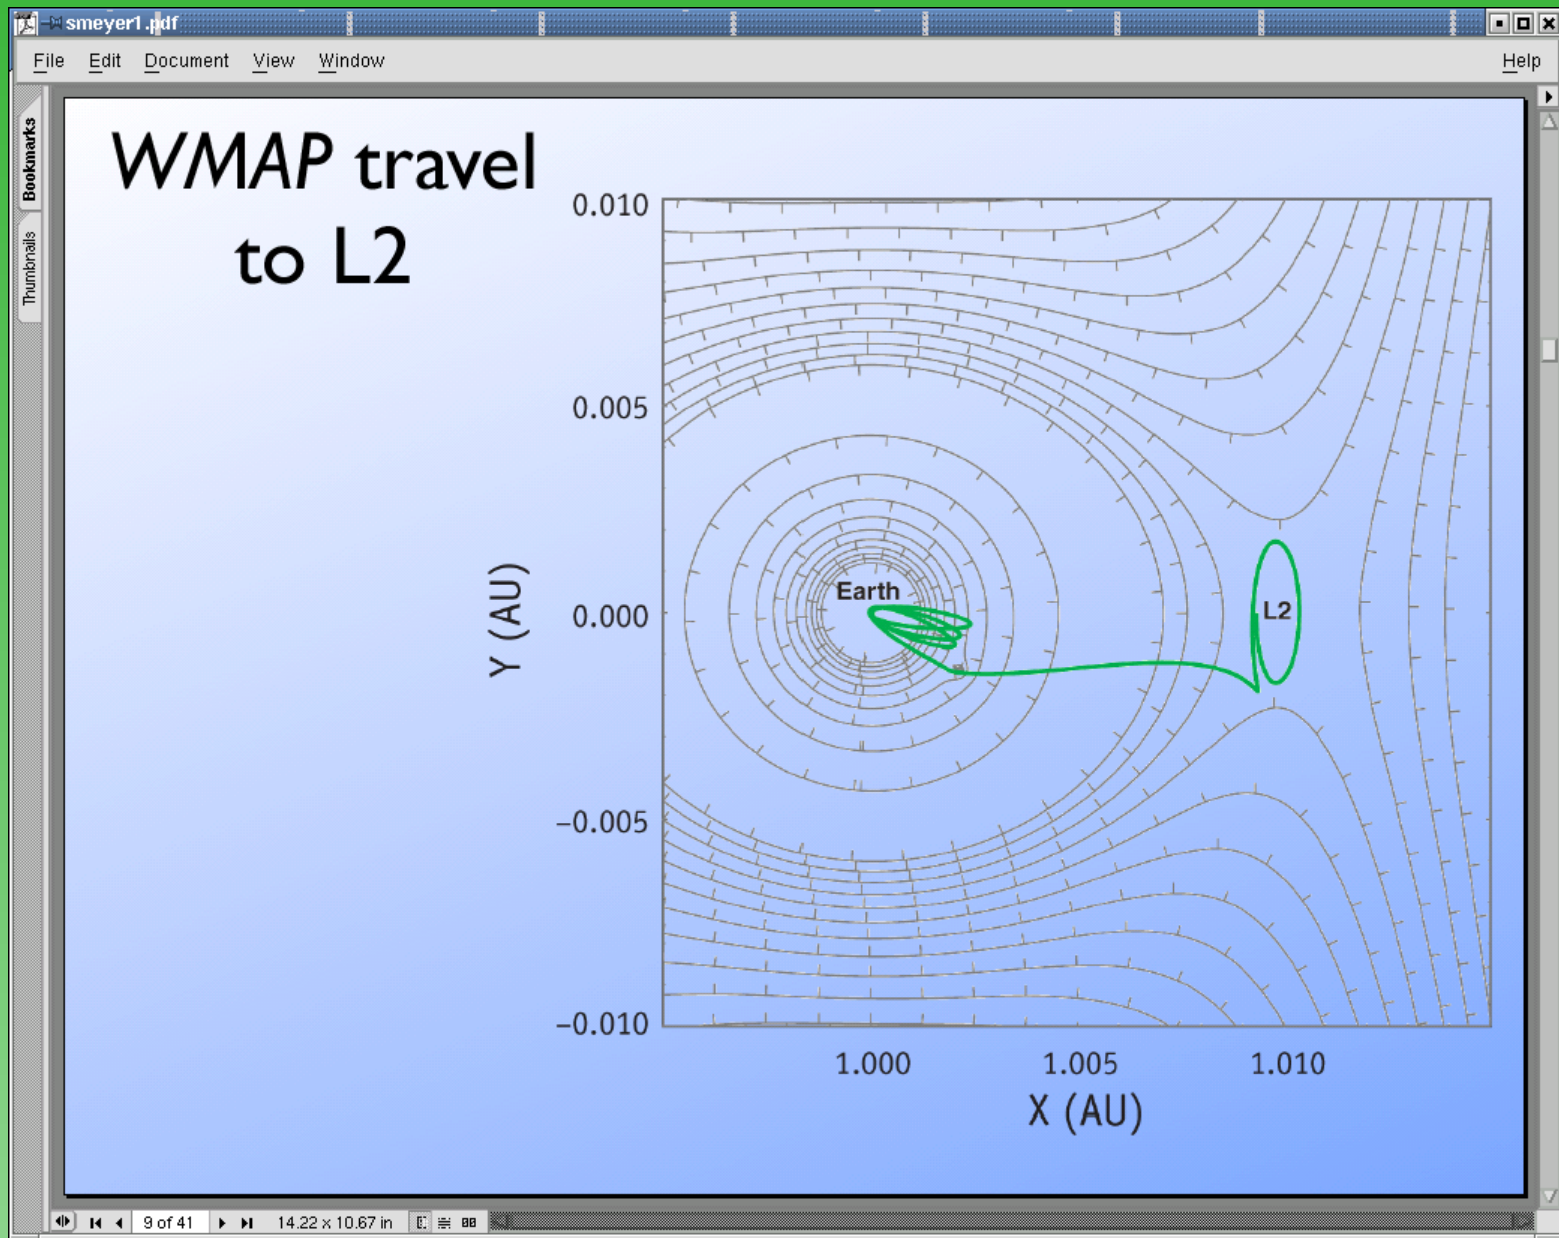

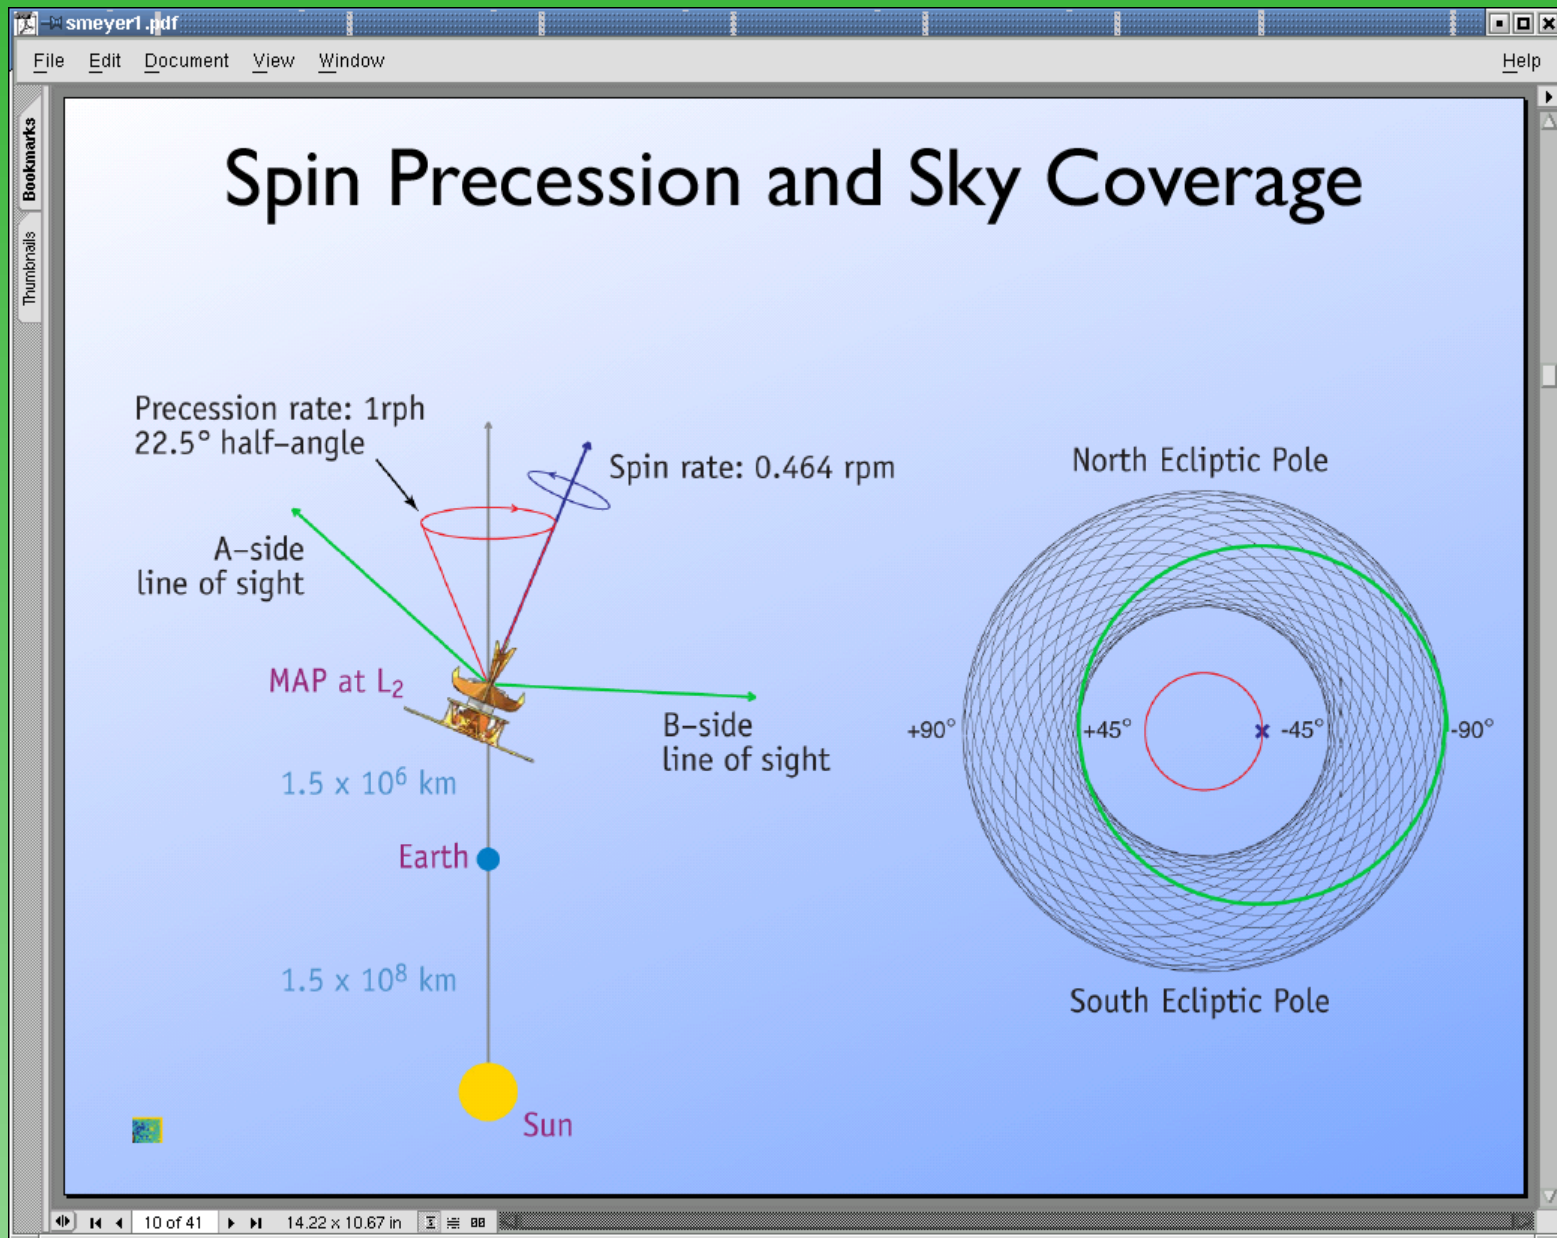

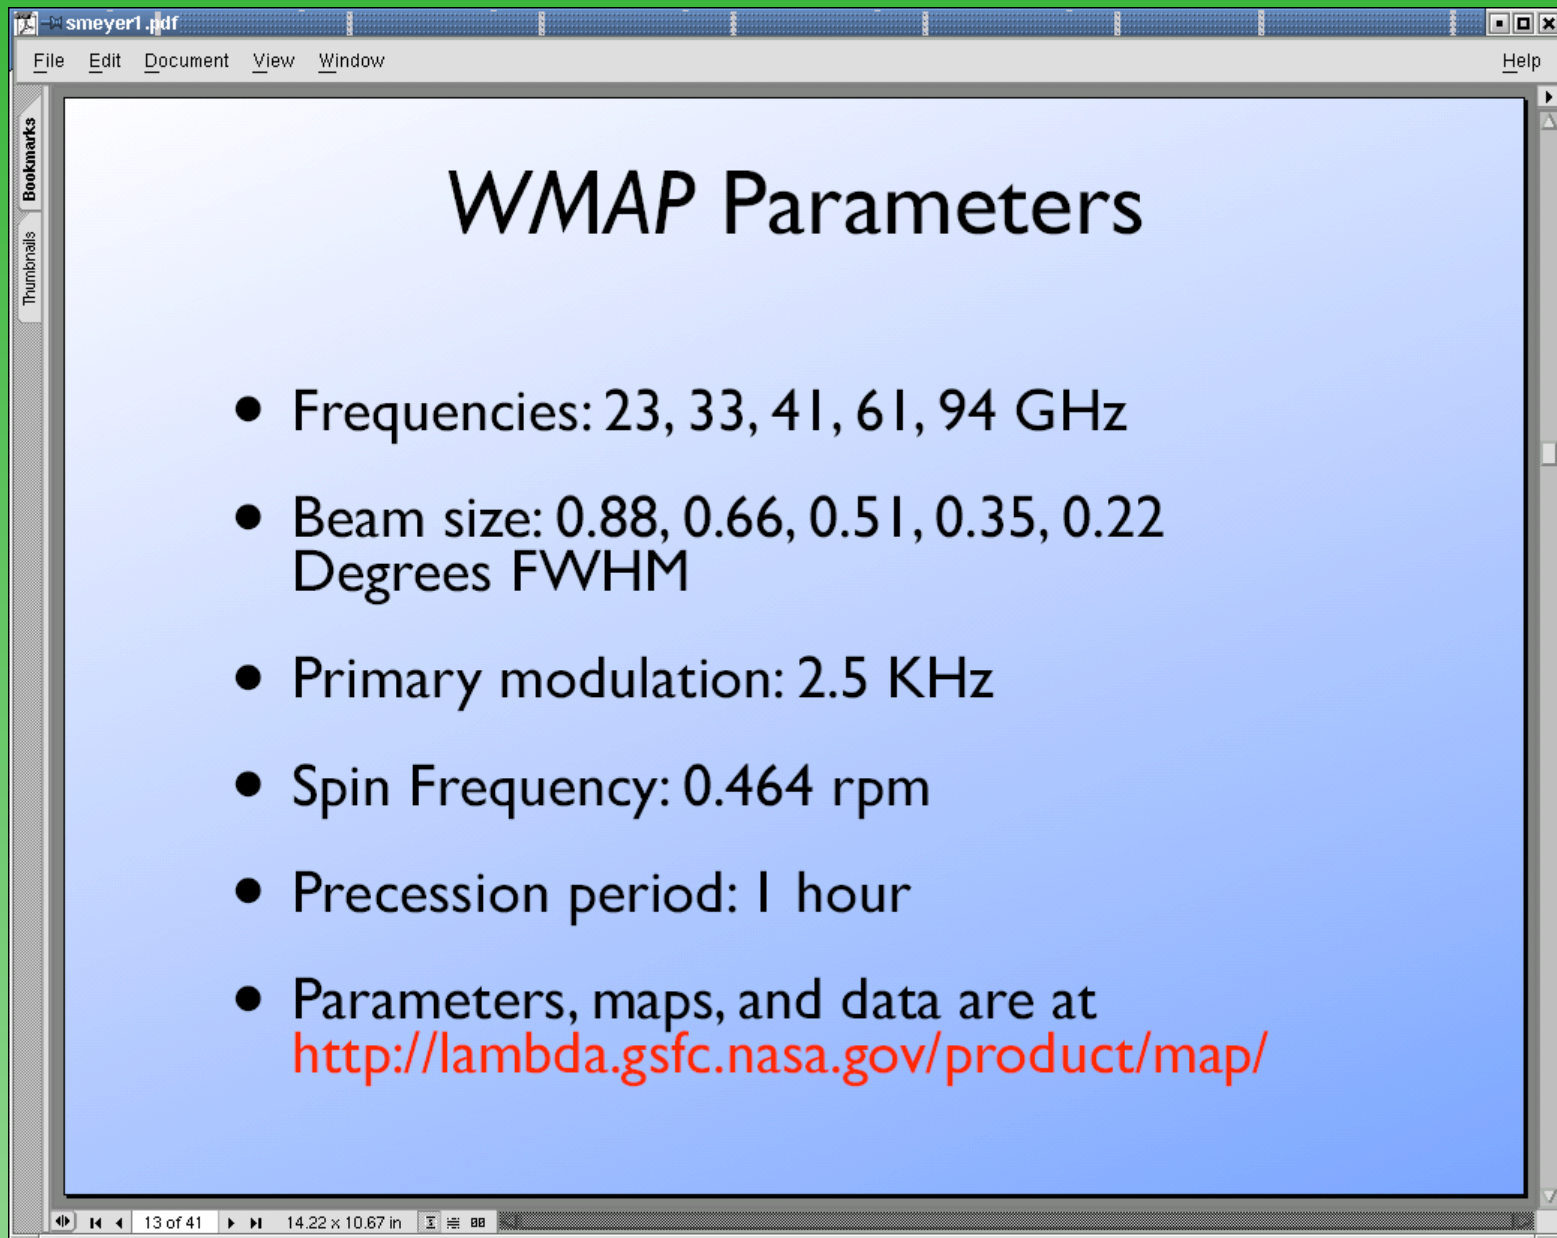

June 30, 2001

The image is a screenshot of a PDF viewer application. The window title is 'smeyer1.pdf'. The menu bar includes 'File', 'Edit', 'Document', 'View', 'Window', and 'Help'. On the left side, there are tabs for 'Bookmarks' and 'Thumbnails'. The main content area has a light blue background and displays the title 'WMAP Parameters' in a large, bold, black font. Below the title is a bulleted list of six items. The last item includes a URL in red text. At the bottom of the window, a status bar shows navigation controls, the page number '13 of 41', and the dimensions '14.22 x 10.67 in'.

WMAP Parameters

- Frequencies: 23, 33, 41, 61, 94 GHz
- Beam size: 0.88, 0.66, 0.51, 0.35, 0.22 Degrees FWHM
- Primary modulation: 2.5 KHz
- Spin Frequency: 0.464 rpm
- Precession period: 1 hour
- Parameters, maps, and data are at <http://lambda.gsfc.nasa.gov/product/map/>

13 of 41 14.22 x 10.67 in

Power spectrum estimation

The sky can be described in terms of spherical harmonics

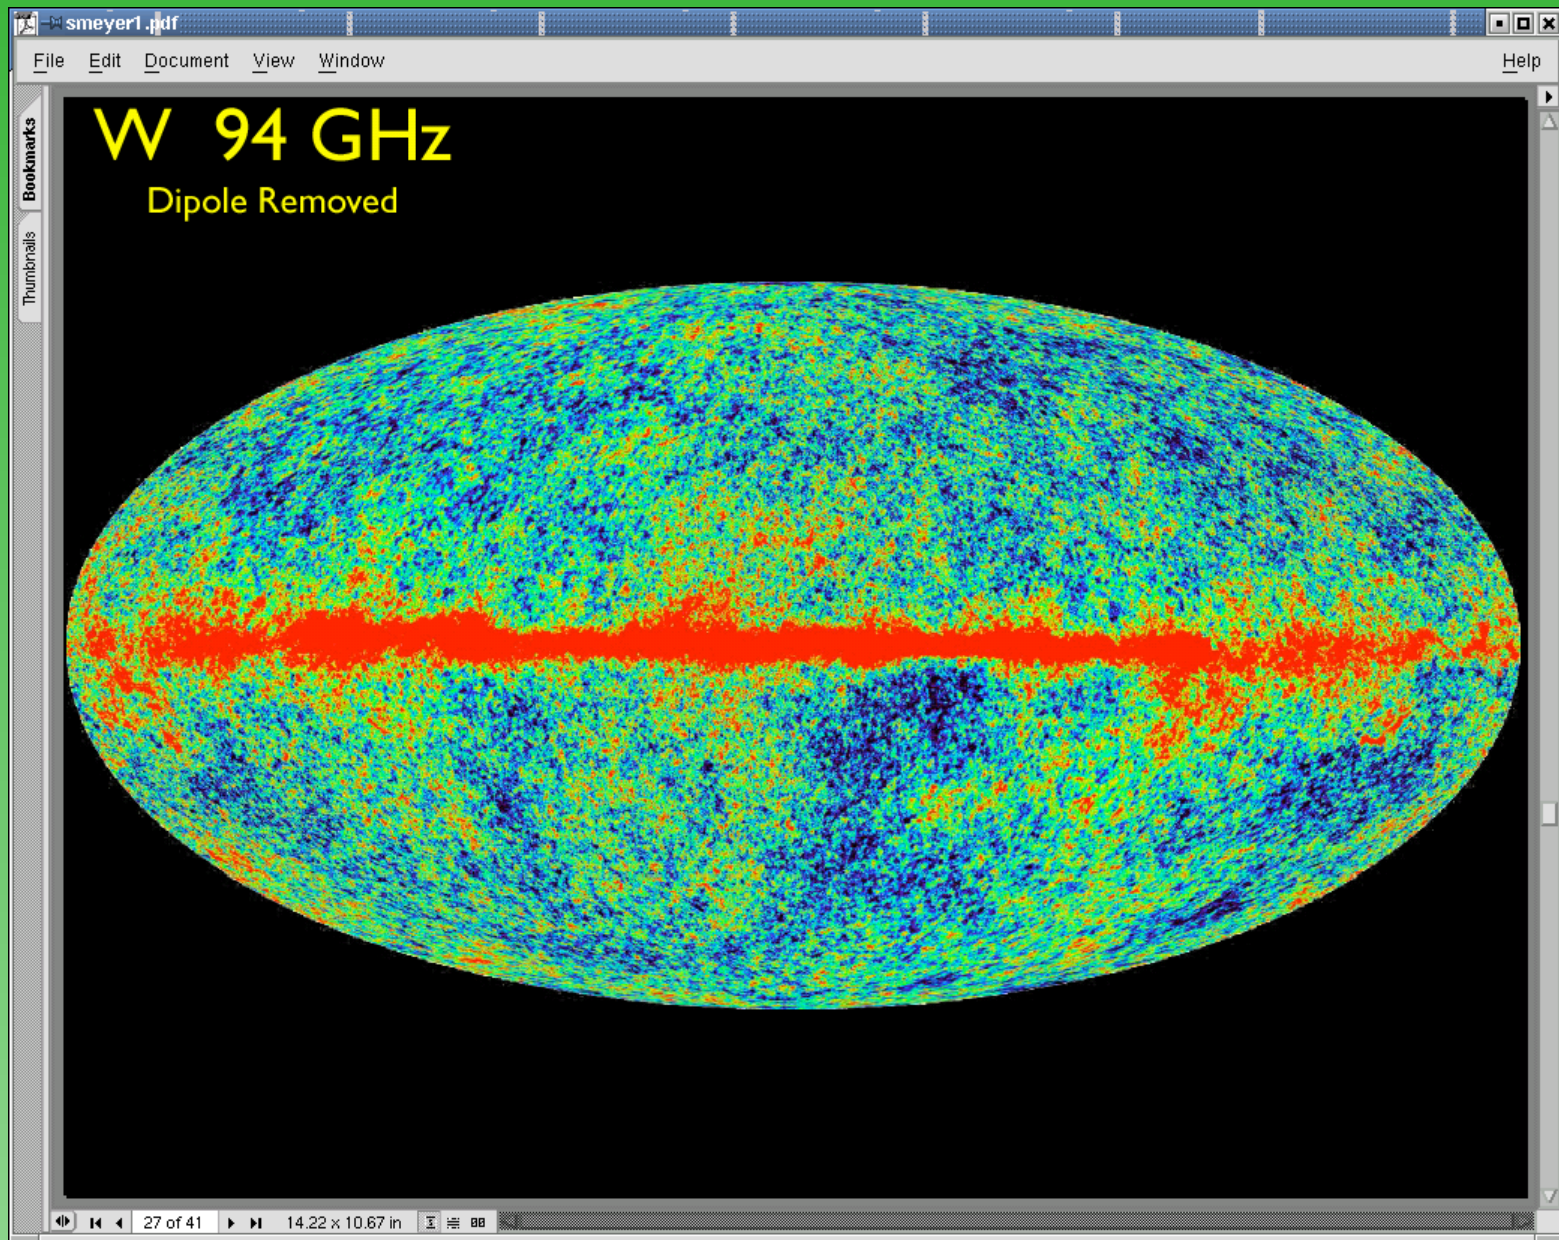

$$\Delta T(\mathbf{n}) = \sum a_{lm} Y_{lm}(\mathbf{n})$$

For the CMB we assume $\Delta T(\mathbf{n})$ is Gaussian distributed
and define

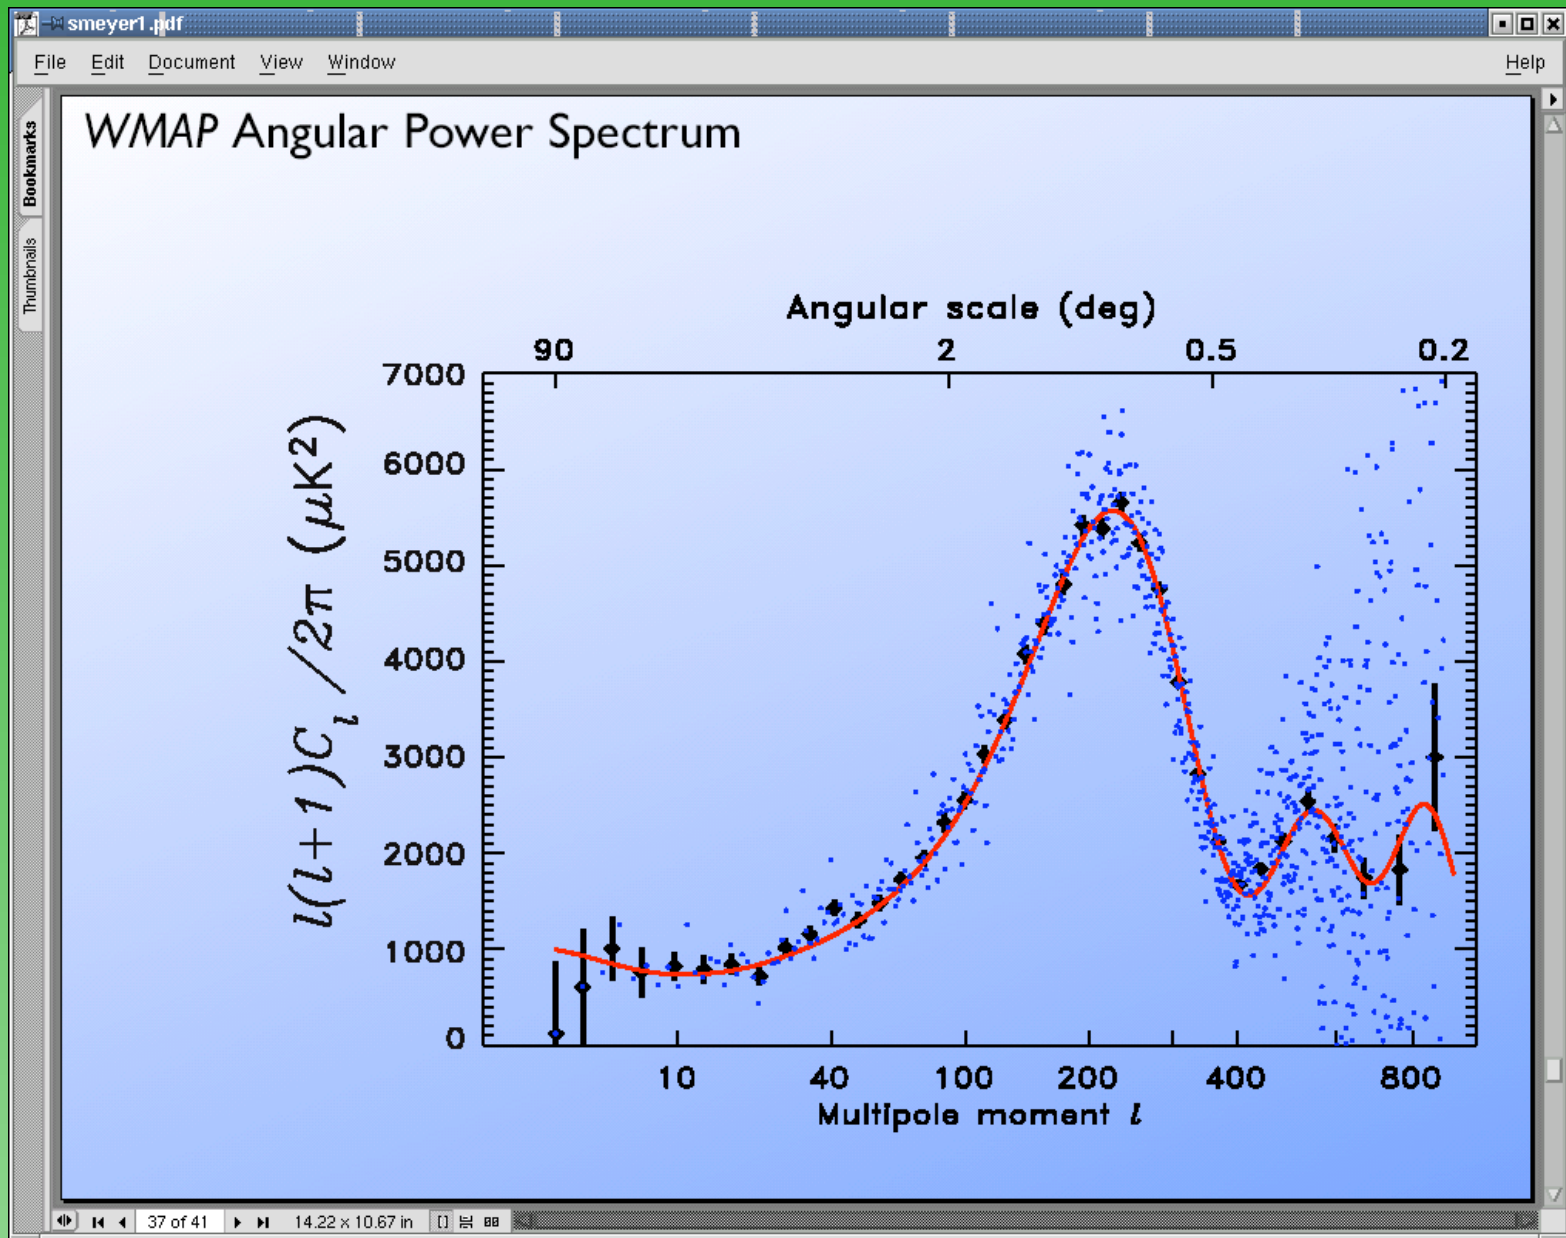

$$C_l \equiv \frac{1}{2l+1} \sum |a_{lm}|^2$$

Spherical harmonics decomposition

Summary

New questions

- What gave rise to those perturbations? Quantum Mechanics of early Universe?
- What is the unknown form of energy?
- How is the Dark Matter related, if at all, to the baryonic matter?
- Do all these answers fit into a unified theory?
